Response to Amendment

1. The amendment filed on September 2, 2008 has been accepted and entered.

Allowable Subject Matter

2. Claims 1-2, 4-5, 7-13, 16-21 are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding claims 1-2, 7-10, none of the prior art of record specifies or makes obvious a radiation detecting apparatus, namely the virtual event generator means that generates radiation event signals of the defective radiation converting element based on the radiation event signals from other radiation converting elements of the array by:

assigning at least two of the individual radiation converting elements of the array as contributing elements,

selecting a selected one of the contributing elements,

each time the selected contributing element receives a radiation event, generating both an event signal for the selected contributing elements and a event signal for the defective element,

while radiation events are being received, randomly changing the selected contributing element, in combination with the other claimed elements.

Regarding claims 4-5, the allowable subject matter was disclosed in a prior office action dated June 2, 2008.

Regarding claim 11, none of the prior art of record specifies or makes obvious a gamma camera, namely the virtual event generator which:

receives the output signals from contributing radiation detecting elements of the array,

determines whether the contributing radiation detecting elements are randomly assigned a token, and

generates digital output signals for the defective radiation detecting element based on the output signals from contributing radiation detecting elements of the array, which hold the token, in combination with the other claimed elements.

Regarding claims 12-13, 16-20, none of the prior art of record specifies or makes obvious a method of detecting radiation, namely the steps of awarding a token to at least one of the non-defective pixel location adjacent to the defective pixel location; in response to receiving a radiation event signal corresponding to the non-defective pixel location with the token, generating radiation event signals for the defective pixel location based on the radiation event signals from the at least one non-defective locations with the token and transferring the token to another non-defective pixel location adjacent to the defective, pixel location, in combination with the other claimed steps.

Regarding claim 21, none of the prior art of record specifies or makes obvious an imaging apparatus comprising:

a means for assigning detector elements proximate to each defective element as contributing detector elements whose outputs form the basis of the generating of the radiation event signal for the defective detector elements and a means for generating radiation event signals for defective detector elements in response to receiving a radiation event signal

corresponding to a randomly selected contributing detector element, the selected contributing elements changing randomly, in combination with the other claimed elements.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
